Ponds in Maidenhead 2018
Page 1
This survey was undertaken from March to May 2018 to identify and look at ponds under 2 hectares, but not small garden ponds, within the 10 wards of Maidenhead, with emphasis on those ponds with frogs and toads present. 155 ponds were identified from aerial survey and local knowledge in the Maidenhead area of 119 sq.km. or 1.3 ponds per sq. km.
Surveyors in Cookham were Derek Tyler and his team from Wild Cookham, and the remainder of Maidenhead was by Mark Hemmings of Wild Maidenhead.
69 ponds were surveyed and 15 ponds were found to have either frog or toad, being 22%. Surveys were done using Freshwater Habitat Trust Pondnet forms.
Toads in Maidenhead are largely dependent for mating, upon Summerleaze Lake and Strande Lake, with their foraging areas around the lakes
The general decline in UK ponds is very evident in Maidenhead with many abandoned or stocked with fish, to the detriment of amphibeans
